(57) Abstract

PURPOSE: To handle the business documents in the service desired by a user by converting the business document of an OSI standard form received from a computer system of a different type into a desired AP form.

CONSTITUTION: A business document form conversion system 1 contains a document data input means 11, a document data analysis means 12, a host form conversion means 13, a host form document file 14, an AP form input means 15, an AP form conversion means 16, and an AP form document file 17. Then the system 1 is connected to a received document file 2, an AP form input device 3, and a various AP 4. The received business documents of an OSI standard form are converted into the business document data of a host form and then into the forms proper to various applications so that the accesses are attained with various application programs controlled by a host. Thus the universal applicability is improved to users.
